

복습 예상문제 제1회 — 영어

박지민

20문항 | 총점 100점 | 배점: [4점]×5 + [5점]×10 + [6점]×5

1. [5점] 오선영 2과

다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

When we think about science, we might consider it as a domain ①reserved exclusively for scientists in long, white lab coats who spend their days conducting experiments and ②analyze data. They seem ③to have very little in common with ordinary people like us. However, this perception is far from the truth. There have been numerous citizen science projects ④in which ordinary people ⑤have made contributions to remarkable scientific accomplishments. Let's take a look at two of them.

- ① reserved
- ② analyze
- ③ to have
- ④ in which
- ⑤ have made

2. [5점] 오선영 2과

다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

It was online media ①that helped spread the word about Galaxy Zoo, ②bringing more and more participants to the website. Shortly after the website was launched, nearly 70,000 classifications ③were making per hour. In a year and a half, more than 80,000 individuals participated, and they made more than 75 million classifications. If it had not been for those participants, Schawinski ④couldn't have classified that many images. In fact, it ⑤would have taken him decades on his own.

- ① that
- ② bringing
- ③ were making
- ④ couldn't have classified
- ⑤ would have taken

3. [6점] 오선영 2과

다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

There were unusual ribbons of green and purple light, ① some of which seemed to stretch for thousands of kilometers. Unsure of what they were, the group decided to name the phenomenon “Steve,” based on a scene from an animated movie ② which some characters give that name to an unfamiliar object. They ③ showed their photos of Steve to a professor of astronomy at a local university and a scientist at NASA. Surprisingly, ④ neither of them had any idea what Steve was. They realized that the group had discovered a new type of phenomenon that ⑤ had never been properly studied.

- ① some of which
- ② which
- ③ showed
- ④ neither
- ⑤ had never been

4. [5점] 오선영 2과

다음 글의 밑줄 친 ㉠~㉥ 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?

They ㉠ showed their photos of Steve to a professor of astronomy at a local university and a scientist at NASA. ㉡ Surprisingly, neither of them had any idea what Steve was. They ㉢ doubted that it was not an aurora, but it did not ㉣ resemble anything they had seen before. They ㉤ realized that the group had discovered a new type of phenomenon that had never been properly studied.

- ① ㉠
- ② ㉡
- ③ ㉢
- ④ ㉣
- ⑤ ㉤

5. [4점] 오선영 2과

다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

They realized that the group had discovered a new type of phenomenon that had never been properly studied. In order to learn more about it, NASA _____ a citizen science project involving the public. The project asked ordinary people to gather photos of Steve and send them to NASA. It is still in progress today. In honor of the aurora chasers who first discovered the phenomenon, the name “Steve” has been kept.

- ① canceled
- ② criticized
- ③ delayed
- ④ opposed
- ⑤ funded

6. [4점] 오선영 2과

다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

In honor of the aurora chasers who first discovered the phenomenon, the name “Steve” has been kept. However, it is now written in all _____ letters and stands for “Strong Thermal Emission Velocity Enhancement.” Experts have acknowledged that it is the dedicated members of the aurora chasers group that deserve the credit for discovering STEVE. If it had not been for them, it might have remained unnoticed forever. There are many interesting theories about STEVE, but none of them have been proven for certain.

- ① silent
- ② golden
- ③ foreign
- ④ capital
- ⑤ lower

7. [4점] 오선영 2과

다음 글의 밑줄 친 acknowledged와 의미가 가장 가까운 것은?

Experts have acknowledged that it is the dedicated members of the aurora chasers group that deserve the credit for discovering STEVE. If it had not been for them, it might have remained unnoticed forever. There are many interesting theories about STEVE, but none of them have been proven for certain. Scientists and citizens continue to collaborate to solve this mystery, and they are learning more and more about STEVE every day.

- ① recognized
- ② denied
- ③ regretted
- ④ predicted
- ⑤ concealed

8. [6점] 오선영 2과

다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

He had to classify around one million images of galaxies according to their shape. Since they all looked similar but were actually shaped slightly differently, the best way to do this was to sort them while _____. Of course, this would require a tremendous amount of time. It took Schawinski a whole week to classify just 50,000 galaxies. He thought, “But what about the remaining 950,000?”

- ① comparing them with older photographs
- ② grouping them by brightness automatically
- ③ having computers label their shapes
- ④ memorizing the names of major galaxies
- ⑤ looking at each one individually

9. [5점] 오선영 2과

다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

After photographing Steve for several years and discussing what it might be, the group members decided to _____. They showed their photos of Steve to a professor of astronomy at a local university and a scientist at NASA. Surprisingly, neither of them had any idea what Steve was. They realized that the group had discovered a new type of phenomenon that had never been properly studied.

- ① get help from experts
- ② give up the project completely
- ③ sell their photos to magazines
- ④ keep the lights a secret
- ⑤ build their own observatory

10. [6점] 오선영 2과

다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

They seem to have very little in common with ordinary people like us. However, this perception is far from the truth. In reality, science _____, and we all have the ability to play a role in the advancement of science. There have been numerous citizen science projects in which ordinary people have made contributions to remarkable scientific accomplishments. Let's take a look at two of them.

- ① requires years of formal training
- ② is too complex for most people
- ③ depends on expensive equipment
- ④ belongs to everyone
- ⑤ advances only inside laboratories

11. [5점] 오선영 2과

다음 글의 주제로 가장 적절한 것은?

One evening after work, Schawinski met a friend named Chris Lintott and complained about the situation. Lintott suggested that he turn to the Internet to ask other people for help. Eventually, the two men ended up launching a crowdsourced online project known as Galaxy Zoo. It was online media that helped spread the word about Galaxy Zoo, bringing more and more participants to the website. In a year and a half, more than 80,000 individuals participated, and they made more than 75 million classifications.

- ① the risks of sharing scientific data online
- ② the history of galaxy photography at Oxford
- ③ how an online crowdsourcing project solved an overwhelming task
- ④ why astronomers refused help from the public
- ⑤ the technical limits of early astronomy websites

12. [5점] 오선영 2과

다음 글의 제목으로 가장 적절한 것은?

In Alberta, Canada, there were some “aurora chasers” who formed an informal group online. They would leave their homes at night and try to get exceptional photographs of auroras. In the summer of 2014, the group members began to notice something strange appearing in the night sky. There were unusual ribbons of green and purple light, some of which seemed to stretch for thousands of kilometers. Sometimes they lasted for just a few minutes, while other times they remained in the sky for a whole hour. They were similar in appearance to auroras, yet they possessed some notably different features.

- ① How Auroras Are Born in the Northern Sky
- ② The Day Amateur Astronomy Ended
- ③ Why Auroras Vanish Within Minutes
- ④ Cameras That Changed Modern Science
- ⑤ A Strange New Light Spotted by Hobbyists

13. [6점] 오선영 2과

밑줄 친 long, white lab coats가 다음 글에서 의미하는 바로 가장 적절한 것은?

Most of the individuals involved in these two projects are not professional scientists. Instead, they are citizen scientists — ordinary people who desire to help advance science in areas that they are interested in. Even though citizen scientists may not have science degrees or long, white lab coats, they are still capable of making valuable contributions to science. You can become one as well if you have curiosity and an interest in taking part in scientific research. The next great scientific achievement could be made by citizen scientists volunteering their time for the purpose of better understanding the world.

- ① protective clothing required for laboratory safety
- ② the formal status of professional scientists
- ③ the boring routines of everyday research
- ④ the high cost of scientific equipment
- ⑤ the strict dress codes of universities

14. [4점] 오선영 2과

다음 글의 밑줄 친 them이 가리키는 것으로 가장 적절한 것은?

They showed their photos of Steve to a professor of astronomy at a local university and a scientist at NASA. Surprisingly, neither of them had any idea what Steve was. They realized that the group had discovered a new type of phenomenon that had never been properly studied.

- ① the aurora chasers
- ② the photos of Steve
- ③ the group members
- ④ the professor and the NASA scientist
- ⑤ the ribbons of unusual light

15. [4점] 오선영 2과

다음 글의 내용과 일치하는 것은?

Kevin Schawinski was a young astronomy researcher studying black holes and the evolution of galaxies at the University of Oxford. This might sound exciting, but his job there was dull and time-consuming. He had to classify around one million images of galaxies according to their shape. Of course, this would require a tremendous amount of time. It took Schawinski a whole week to classify just 50,000 galaxies. He thought, "But what about the remaining 950,000?"

- ① It took Schawinski a whole week to classify 50,000 galaxy images.
- ② Schawinski found his classification job thrilling from the start.
- ③ Schawinski was a researcher at the University of Cambridge.
- ④ Schawinski had to classify about ten million galaxy images.
- ⑤ Schawinski finished classifying all the images within a month.

다음 글의 내용과 일치하는 것은?

In Alberta, Canada, there were some "aurora chasers" who formed an informal group online. They would leave their homes at night and try to get exceptional photographs of auroras. In the summer of 2014, the group members began to notice something strange appearing in the night sky. There were unusual ribbons of green and purple light, some of which seemed to stretch for thousands of kilometers. Sometimes they lasted for just a few minutes, while other times they remained in the sky for a whole hour. They were similar in appearance to auroras, yet they possessed some notably different features.

- ① The aurora chasers first met through a formal government program.
- ② The strange lights were first noticed in the winter of 2014.
- ③ The ribbons of light were mostly red and yellow.
- ④ The lights looked completely different from auroras.
- ⑤ The lights sometimes lasted a few minutes and sometimes stayed for about an hour.

17. [5점] 오선영 2과

다음 글의 내용과 일치하지 않는 것은?

More than 15 years have passed since the project first began in 2007. Galaxy Zoo has now grown into Zooniverse, which is one of the most popular platforms on the Internet for ordinary people who want to participate in science projects. It is more active than ever before, with about 2 million registered users worldwide. It now offers a wide range of projects in astronomy, biology, physics, and more. If you want to get involved, you should definitely check it out!

- ① The project first began in 2007.
- ② Galaxy Zoo has grown into Zooniverse.
- ③ Zooniverse offers projects only in the field of astronomy.
- ④ Zooniverse has about 2 million registered users worldwide.
- ⑤ Zooniverse is one of the most popular platforms for people who want to join science projects.

18. [5점] 오선영 2과

다음 글의 내용과 일치하는 것은?

The website was kept as simple as possible, with a very basic design and an easy-to-use interface. This allowed those who wanted to participate to get started quickly. New visitors were greeted with a brief tutorial that explained the project. Then they were shown an image of a galaxy and asked to click buttons that described its features. Is the galaxy smooth and rounded? Is its shape an oval or a spiral? After completion of the tutorial and a little bit of practice, the participants were able to classify galaxies effectively.

- ① Visitors were shown a galaxy image and classified it by clicking buttons.
- ② The website had a complicated design to ensure accuracy.
- ③ Visitors had to pass a difficult entrance test before participating.
- ④ Participants described galaxy features in long written reports.
- ⑤ Only professional astronomers were allowed to use the website.

글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?

주어진 문장: Then they would share them with the rest of the group.

In Alberta, Canada, there were some “aurora chasers” who formed an informal group online. (①) They would leave their homes at night and try to get exceptional photographs of auroras. (②) In the summer of 2014, the group members began to notice something strange appearing in the night sky. (③) There were unusual ribbons of green and purple light, some of which seemed to stretch for thousands of kilometers. (④) Sometimes they lasted for just a few minutes, while other times they remained in the sky for a whole hour. (⑤)

- ① (①)
- ② (②)
- ③ (③)
- ④ (④)
- ⑤ (⑤)

다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Most of the individuals involved in these two projects are not professional scientists. Instead, they are citizen scientists — ordinary people who desire to help advance science in areas that they are interested in. Even though citizen scientists may not have science degrees or long, white lab coats, they are still capable of making valuable contributions to science. You can become one as well if you have curiosity and an interest in taking part in scientific research. The next great scientific achievement could be made by citizen scientists volunteering their time for the purpose of better understanding the world.

According to the passage, people without (A)_____ can still make (B)_____ contributions to the progress of science.

- ① (A) scientific careers — (B) accidental
- ② (A) curiosity — (B) financial
- ③ (A) enough free time — (B) minor
- ④ (A) professional qualifications — (B) meaningful
- ⑤ (A) internet access — (B) temporary
